## Installing Ubuntu in VMWare

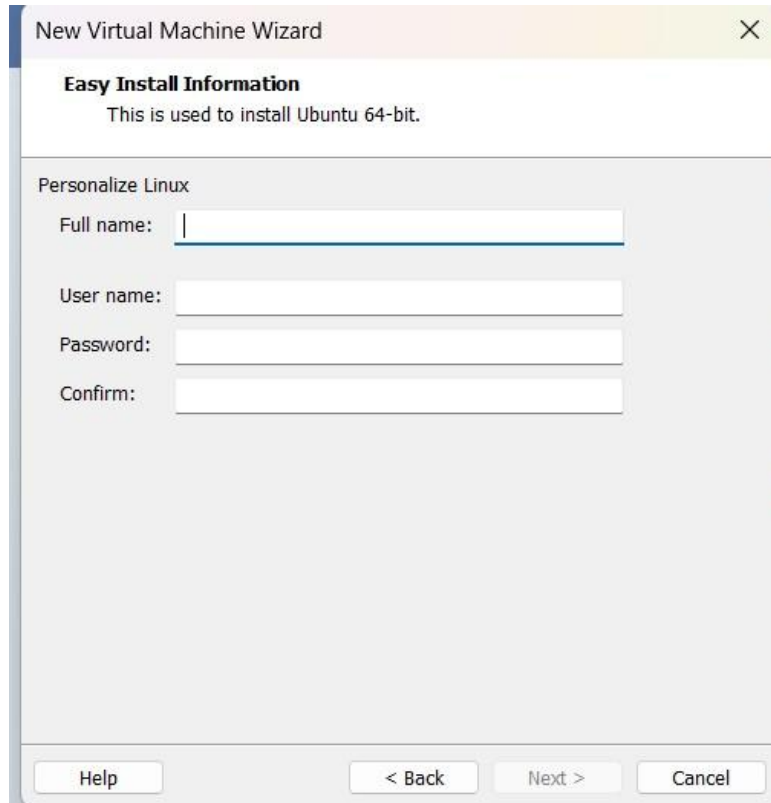

**Step 5:** Open the installed VMware application.

**Step 6:** Click on “Create new virtual machine”. Browse the ISO file that has been downloaded and select it.

**Step 7:** Enter all the details >> click on next. Personalization of Virtual Machine.

The screenshot shows a window titled "New Virtual Machine Wizard" with a close button (X) in the top right corner. Below the title bar, the section "Easy Install Information" is displayed, with a subtitle "This is used to install Ubuntu 64-bit." Below this, the "Personalize Linux" section contains four input fields: "Full name:", "User name:", "Password:", and "Confirm:". The "Full name:" field is currently active, with a cursor inside. At the bottom of the window, there are four buttons: "Help", "< Back", "Next >", and "Cancel".

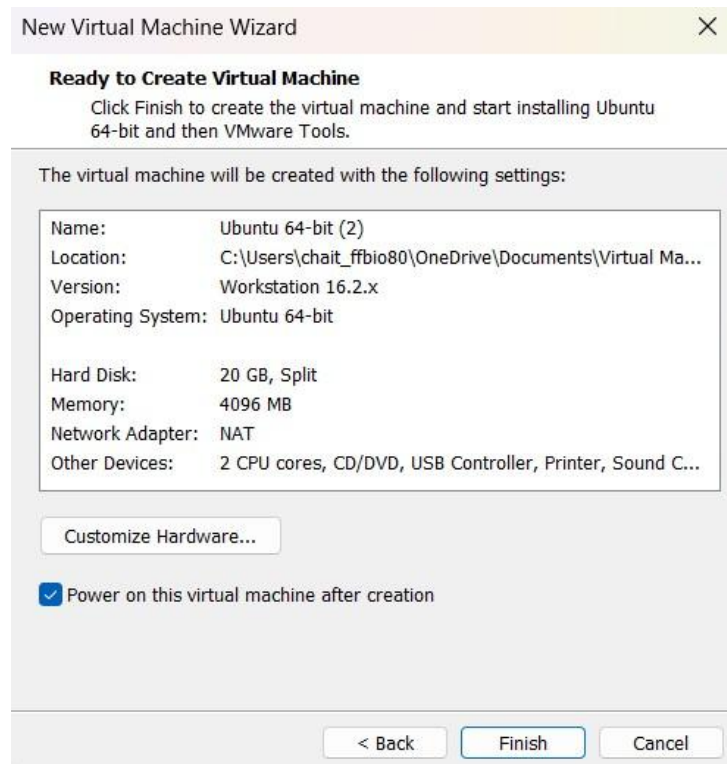

**Step 8:** Enter Virtual machine name >> click on next.

The screenshot shows the 'New Virtual Machine Wizard' window. The title bar says 'New Virtual Machine Wizard'. The main heading is 'Name the Virtual Machine' with the subtitle 'What name would you like to use for this virtual machine?'. There are two input fields: 'Virtual machine name:' with the text 'Ubuntu 64-bit (2)' and 'Location:' with the text 'C:\Users\chait\_ffbio80\OneDrive\Documents\Virtual Machines\'. A 'Browse...' button is next to the location field. At the bottom, there are three buttons: '< Back', 'Next >', and 'Cancel'.

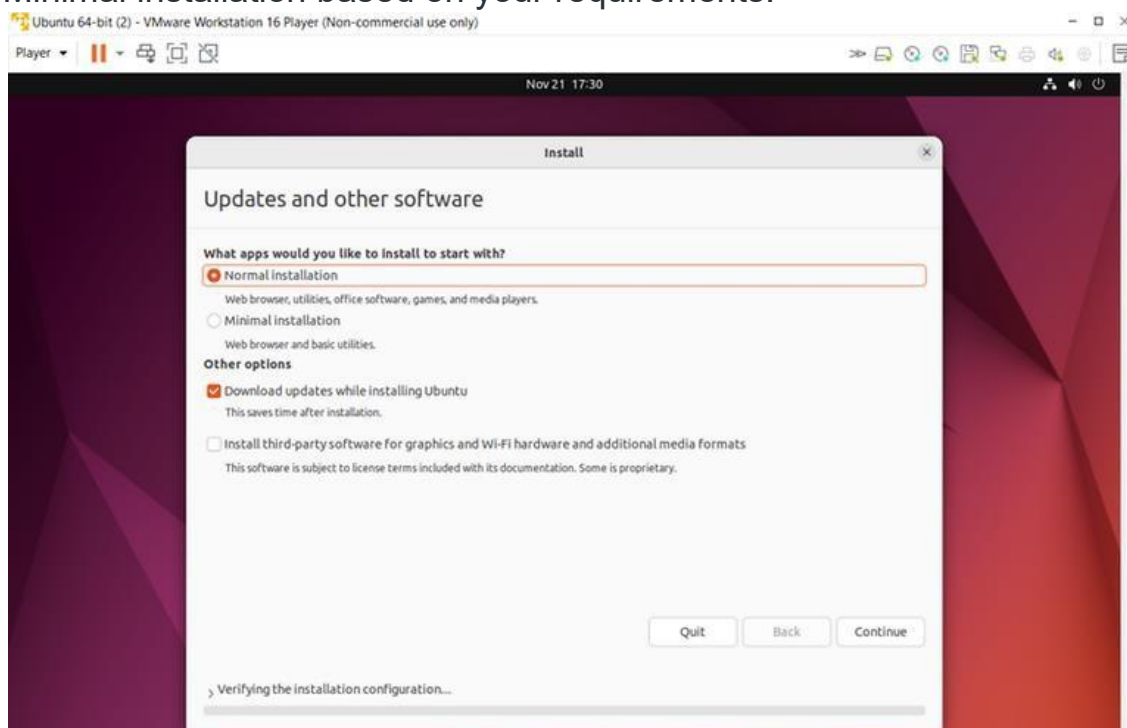

**Step 9:** Specify disk capacity >> click on next.

The screenshot shows the 'New Virtual Machine Wizard' window, Step 2: 'Specify Disk Capacity'. The title bar says 'New Virtual Machine Wizard'. The main heading is 'Specify Disk Capacity' with the subtitle 'How large do you want this disk to be?'. A text box explains: 'The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.' Below this, there is a 'Maximum disk size (GB):' field with a value of '20.0' and a spin button. A note says 'Recommended size for Ubuntu 64-bit: 20 GB'. There are two radio buttons: 'Store virtual disk as a single file' (unselected) and 'Split virtual disk into multiple files' (selected). A note below the selected option says: 'Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.' At the bottom, there are four buttons: 'Help', '< Back', 'Next >', and 'Cancel'.

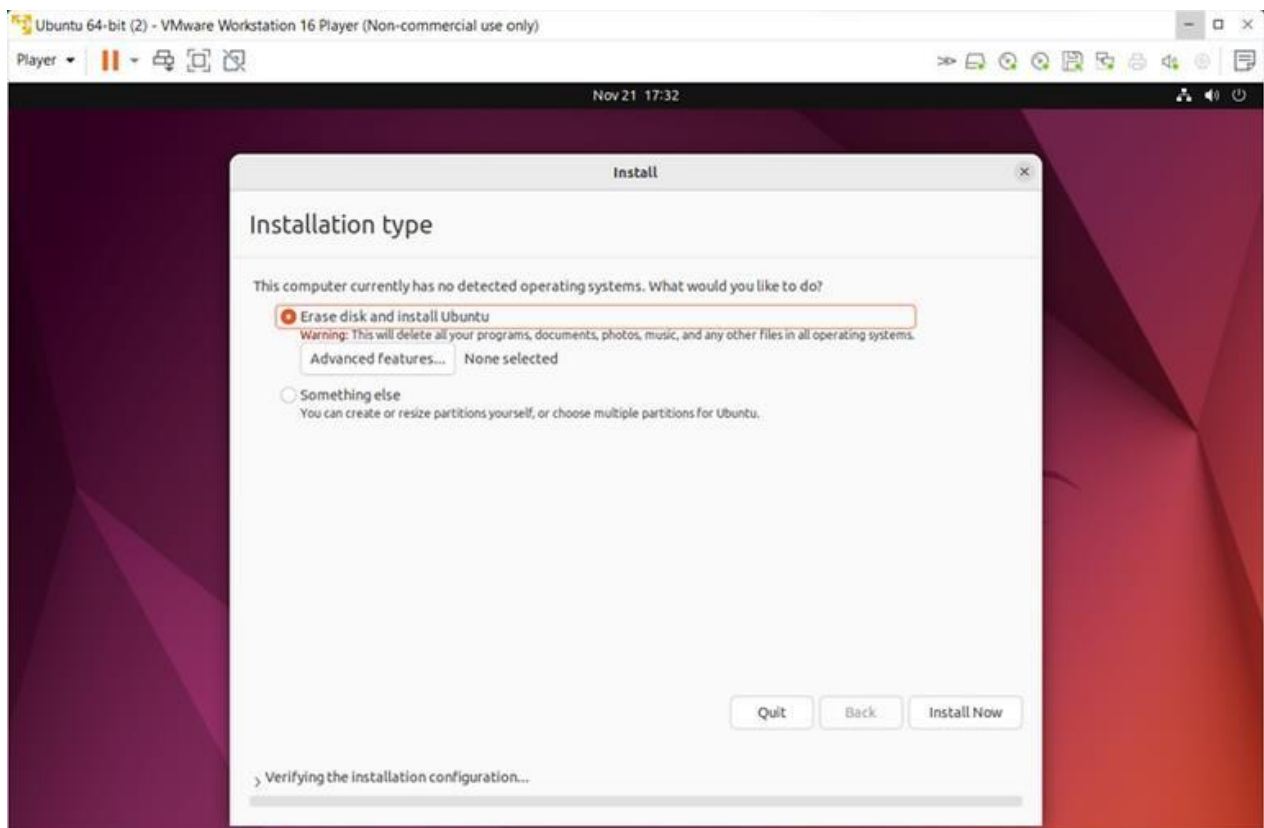

**Step 10:** If needed customize the hardware and click on finish.

**Step 11:** Ubuntu has been successfully installed in VMWare. Now open VMware and click on ubuntu-64 which appears on the left panel. (If not directly opened). Select the language and click on next. Select the Normal or Minimal installation based on your requirements.

**Step 12:** Select Installation type >> Erase disk and install Ubuntu (This will not delete your windows data) >> Click on install now.

## Installing Windows in VMWare

### Step 13

Similarly for windows just install windows 7 (or 10, whichever iso is available) in place of Ubuntu (repeat steps from 5<sup>th</sup> step)
